<u>Title of Presentation</u>
Lipofilling, to restore the volume
<u>Abstract of your presentation</u>
Besides redraping and shaping excess skin, volumizing is important to treat the ageing body, especially the face. Because non-autologous materials like fillers and implants have shown to give inflammatory and capsular reactions in certain patients, lipofilling is gaining more and more popularity. In this presentation new techniques will be discussed and tips and trics will be given to prevent complications and to improve patient satisfaction.
